

## **Hazardous Substances Management**

3PEAK complies with the EU's Directive on Restricting the Use of Certain Hazardous Ingredients in Electronic and Electrical Equipment (RoHS), EU regulations "Registration, Evaluation, Authorization and Restriction of Chemicals" (REACH), "Permanent Organic Pollutants" (POPs), international regulatory requirements and customer requirements, and in combination with the requirements of the IECQ QC080000 hazardous substance process management system, it conducts full process control of hazardous substances from laws and regulations, customer requirements, material control and supplier management to realize the management of hazardous substances in product design and production processes.

3PEAK was established and actively managed harmful substances, and controlled the entire process of hazardous substances from procurement and supplier management, product design and development, incoming material inspection, process control, abnormal handling and other links, and signed an "Environmental Protection Agreement" and "Product Change Agreement" with suppliers. Considering the different risks of product or material containing harmful substances, 3PEAK has prepared the "3PEAK\_HSFP\_81\_Environmental Hazardous Substance Management Procedure", and has formulated product or material hazardous substance testing items, limits and compliance with corresponding instructions at a level. It can confirm the content of product or material hazardous substances through effective third-party testing reports, thereby ensuring that the chemicals used in the product or material meet the relevant requirements of RoHS and REACH.

3PEAK will continue to pay attention to the update status of hazardous substance laws and regulations, continue to collect relevant requirements for hazardous substances put forward by customers, and promptly identify raw materials that are prone to harmful substances and key review items that require them. In addition, 3PEAK accepts customer investigations and audits on harmful substances every year and also completes internal audits and supplier audits as planned, improving and continuously optimizing the audit findings.
